NANOPORE stylus | 1

Non invasive medical treatment for electric puncture with double action:

- ① **Stimulates collagen and elastin synthesis:**
New collagen production by the activation of natural mechanisms of skin autorepair.
- ② **Increases active ingredients penetration:**
Active ingredients vehiculization to the deepest layers of the skin (transdermical mesotherapy).

Indications

- Wrinkles
- Photoaging
- Dilated pores
- Pigment alterations
- Flaccidity
- Cellulite

AGING PROCESS

As we age, collagen and elastin synthesis in our skin decreases.

From the age of 30, it begins a process of loss of those fibers and at 60 years old its production is decreased by 36%.

Collagen deficit

- Wrinkle formation
- Increased flaccidity
- Premature aging

Why to choose **NANOPORE** stylus?
